

Printing and framing instructions

Six documents, 39 sheets in total. Two of them need trimming; the rest print and go straight into a frame.

First — print at actual size

In the print dialog, set scaling to 100%, "Actual size" or "No scaling".

Do NOT use "Fit to page", "Shrink to fit" or "Scale to paper size". Those change the dimensions by a few per cent, which is enough that the trimmed cards no longer fit the frames.

Print one sheet first and measure it before running the rest.

What to print

Document	Sheets	Paper	Cut?
table-cards	9	A4, landscape	No
ring-blessing	1	A4, portrait	No
gifts	1	A4, portrait	No
favours	1	A5, portrait	Yes — see below
pegging	1	A5, landscape	Yes — see below
place-cards	26	A6, portrait	No — folded

Designed for coloured paper — no background fill anywhere, so the stock shows through.

The two that need cutting

These print onto A5 but end up smaller, so they sit properly inside the frame instead of being swallowed by its edge.

- **Cut along the line.** Follow the faint grey line printed near the edge. Cut along it — the line itself comes away with the offcut, so nothing shows on the finished card.
- **Ignore the artwork beyond it.** The flowers deliberately carry on past the line. That is there so a slightly wandering cut still has colour running to the edge. You are not meant to cut around them.
- **Close enough is fine.** Anywhere within a few millimetres of the line is fine. It does not need to be exact.

Finished sizes after cutting:

- **Favours** — 130mm wide × 180mm tall
- **Pegging** — 180mm wide × 130mm tall

The A5 frames only show 118 × 169mm, so a 130 × 180mm card is held by the frame instead of dropping through. A4 frames show 198 × 289mm and take a full sheet, which is why those aren't cut.

The ones that don't need cutting

Table cards, Ring Blessing and Gifts print onto a full sheet and go straight into the frame. No line, nothing to trim.

Place cards

26 cards, one per person on the top table. Not framed — each folds in half across the middle so it stands up.

- The design sits on the bottom half of the sheet. The top half is blank on purpose — it becomes the back.
- Fold across the middle, with the blank half folding backwards. Lining the corners up puts the fold in the right place.
- If your printer won't take A6, print four to an A4 sheet at 100% and cut into quarters — but check the first one measures 105mm across before doing the rest.
